Art Unit: 3731

DETAILED ACTION

Claim Objections

1. Claim 24 is objected to because of the following informalities: the phrase "the segmented" is repeated in line 7. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-9,11,13-20, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 00/30563 (Brown).

The embodiment of the stent in Figures 2 and 3 of Brown meets the limitations of the claimed invention. There are first serpentine bands of a first wavelength and amplitude alternating with second serpentine bands of a second wavelength and amplitude. "Splines" connect troughs of one band to a peak of an adjacent band. Each band has at least one spline extending from it. Regarding claims 7 and 8, the splines could also be called "longitudinal connectors."

3. Claims 1-9, 11-20,22-27 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,511,505 (Cox et al).

Application/Control Number: 10/063,042

Art Unit: 3731

Cox discloses a stent structure in Figure 8A that meets the limitations of the claimed invention. Serpentine bands of a first wavelength and amplitude (75) alternate with second serpentine bands of a second wavelength and amplitude (73,74). "Splines" (72) connect troughs of one band to a peak of an adjacent band. Each band has at least one spline extending from it. Regarding claims 7 and 8, the splines could also be called "longitudinal connectors." The splines are in longitudinal alignment with one another to form a "segmented spine."

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 10 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/30563 (Brown).

The embodiment in Figures 2 and 3 includes all the limitations of claim 10, except for the splines extending from sides of the trough and peak regions. Figure 7 of Brown teaches that splines can extend from the sides of trough and peak regions. Therefore, tit would have been obvious to one of ordinary skill in the art at the time the invention was made to form the splines to extend from the sides of troughs and peaks of Figure 2, as this is illustrated in Figure 7 as an alternate way to form splines.

Art Unit: 3731

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pub No. US 2003/0018380 (Craig et al.) discloses a stent structure that meets limitations of the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sarah K Webb whose telephone number is (703) 605-1176. The examiner can normally be reached on Mon-Fri 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, McDermott or Shaver can be reached on (703) 308-0858. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
